## CLAIMS

1. A counter display for articles such as perfumes or  
cosmetic products comprising a display element (2)  
5 to which the articles are designed to be attached,  
characterized in that it also comprises a  
connecting element (3) extending between a lower  
end (3b) secured to the display element (2) and an  
upper end (3a), designed so as to be pivotally  
10 mounted with respect to a ceiling (8) forming the  
upper part of a piece for suspending said display  
element (2) from the ceiling (8) with no contact  
with the ground, and in that a mirror (6) is  
attached to said connecting element (3), said  
15 mirror (6) being arranged such that a person  
standing in front of the display element (2) can  
observe his/her image in said mirror (6).
2. The counter display as claimed in claim 1, in  
20 which the connecting element (3) has, first, a  
front face (41) to which the mirror (6) is  
attached and, second, a rear face (42) to which a  
lighting system (12) is attached.
- 25 3. The counter display as claimed in claim 2, in  
which the connecting element (3) comprises a  
vertical panel (4) to which the mirror (6) is  
attached, the vertical panel (4) extending  
downward via a support panel (5) to which the  
30 display element (2) is attached, the support panel  
(5) being tilted downward relative to the vertical  
panel (4) at an angle of between 90° and 135°.
4. The counter display as claimed in claim 3, in  
35 which the support panel (5) and vertical panel (4)  
of the connecting element (3) respectively have a  
face (52) tilted downward and a rear face (42) to

which lighting systems (12) are attached, which are covered by at least one substantially translucent cover (13) that allows diffuse lighting toward the rear and toward the bottom of said counter display.

5. The counter display as claimed in claim 2, in which the connecting element (3) comprises a vertical panel (4) to which the mirror (6) is attached, the vertical panel (4) extending downward via the display element (2) that is tilted relative to the vertical panel (4) at an angle of between 90° and 135°.

6. The counter display as claimed in claim 5, in which the vertical panel (4) of the connecting element (3) and the display element (2) respectively have a rear face (42) and a face (23) tilted downward, to which faces lighting systems (12) are attached, which are covered by at least one substantially translucent cover (13) allowing diffuse lighting toward the rear and toward the bottom of said counter display.

7. The counter display as claimed in either claim 4 or claim 6, in which the cover (13) comprises, first, a rear plate (13a) extending via a plate (13c) tilted downward and, second, transverse edges (13b) that link the rear plate (13a) and the plate (13c) tilted downward to the counter display in order, also, to allow lighting on the sides of said counter display.

8. The counter display as claimed in any one of the preceding claims, in which the upper end (3a) of the connecting element (3) is formed by a bar (9) provided with means (7) for attachment to the ceiling (8), which allow pivoting of said bar (9) relative to the ceiling (8) about a vertical axis.
